

Declaration of Performance

1404-CPR-2657

1. Unique identification code of the product-type: Torque controlled expansion anchor made of stainless steel m1tr for use in concrete

2. Manufacturer: Mungo Befestigungstechnik AG, Bornfeldstrasse 2, CH-4603 Olten/Switzerland

3. System/s of AVCP: System 1

4. Intended use or use/es:

Product	Intended use
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements
	(which contributes to the stability of the works) or heavy units

5. European Assessment Document: ETAG 001 - part 1 and 2, edition 2013, used as EAD

European Technical Assessment: ETA-12/0375 of 11.08.2015 **Technical Assessment Body:** ZAG - Zavod za gradbenistvo Slovenije

Notified body/ies: ZAG

6. Declared performance:

Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance				
Characteristic values and characteristic values for resistance	See appendix, especially Annexes C1 to C4				

Safety in case of fire (BWR 2)

Essential characteristic	Performance
Characteristic for safety in case of fire	See appendix Annex C5

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Singed for and on behalf of the manufacturer by:

Dipl.-Ing. Massimo Pirozzi Head of Engineering

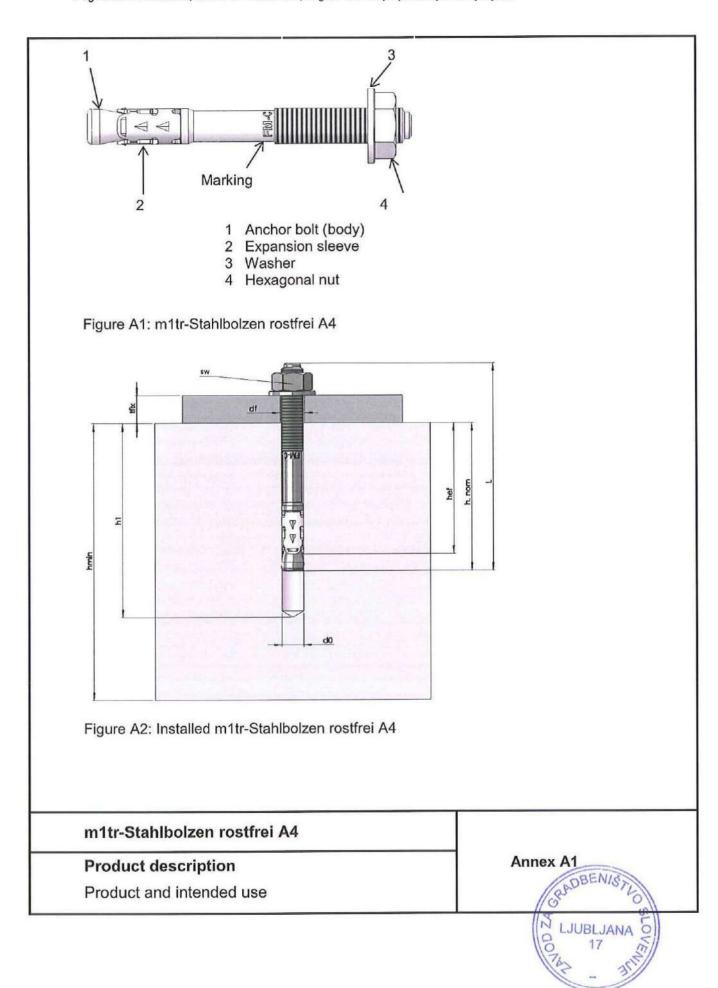

p.p.a. Maimo Dirapi

Olten, 2017-22-12

This DoP Has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language as neutrally specified) legal requirements.

Product description

Product and materials

Annex A2

Specifications of intended use

Anchorages subjected to:

Static, quasi static, seismic load and fire.

Base materials:

- · Cracked and non-cracked concrete.
- Reinforced and unreinforced normal weight concrete of strength class C20/25 at minimum and C50/60 at maximum according to EN 206-1:2000/A2:2005.

Use conditions (Environmental conditions):

The anchor may be used in concrete subject to dry internal conditions and also in concrete subject to
external atmospheric exposure (including industrial and marine environment), or exposure in permanent
damp internal conditions, if no particular aggressive conditions exist.

Note:

Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. desulphurization plants or road tunnels where de-icing materials are used

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Anchorages under static and quasi-static actions are designed in accordance with ETAG 001, Annex C, design method A, Edition August 2010 or CEN/TS 1992-4-4.
- For seismic application the anchorages are designed in accordance with TR 045 "Design of metal anchors for use in concrete under seismic actions".
- For application with resistance under fire exposure the anchorages are designed in accordance with method given in TR 020 "Evaluation of anchorage in concrete concerning resistance to fire".
- Verifiable calculation notes and drawings are prepared taking into account of the load to be anchored.
 The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).

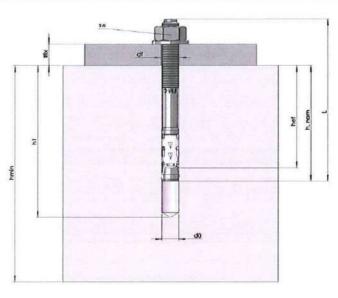

Installation:

- Anchor installation carried out by appropriately qualified personnel and under supervision of the person responsible for technical matters of the site.
- Use of the anchor only supplied by the manufacturer without exchanging the components of an anchor.
- Anchor installation in accordance with the manufacturer's specification and drawings and using the appropriate tools.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor
 is to be placed is in the rang given and is not lower that of the concrete to which the characteristic loads
 apply for.
- Check of concrete being well compacted, e.g. without significant voids.
- Effective anchorage depth, edge distances and spacing not less than the specified values without minus tolerances.
- · Hole drilling by hammer drill.
- · Cleaning of the hole of drilling dust.
- Positioning of the drill holes without damaging the reinforcement.
- Application of specified torque moment using a calibrated torque wrench.
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength mortar and no shear or oblique tension loads in the direction of aborted hole.

The characteristic resistance V⁰Rk,c,fi in C 20/25 to C 50/60 concrete is determined by:

 $V_{Rk,c,fi} = 0,25 \times V_{Rk,c} (\le R90)$ and $V_{Rk,c,fi} = 0,20 \times V_{Rk,c} (R120)$

with Vork,c initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature acc. ETAG 001, Annex C, 5.2.3.4.
