

MCS and MCSr Concrete Screw

Concrete screw of sizes 6, 8, 10, 12 and 14 mm for use in concrete made of galvanized steel (MCS) or stainless steel A4 (MCSr)

1 SPECIFICATIONS OF INTENDED USE

Anchorage subject to:

- Static and quasi-static loading
- Seismic load, category C1 loads, sizes 8-14 for maximum embedment depth

Base materials:

- Cracked and non-cracked concrete
- Reinforced or unreinforced normal weight concrete of strength classes C20/25 to C50/60 according to EN 206-1:2000-12

Approvals:

- European Technical Approval Option 1 for cracked and non cracked concrete
- Fire resistance test certification up to F120
- Seismic performance category C1

Reaction to fire:

- Anchorages satisfy requirements for Class A1

Resistance to fire:

- Fire resistance test certification up to F120 for all sizes (for fire design see ETA-16/0296, Annex C 5)

Installation:

- Hole drilling by hammer drilling only
- Anchor may be adjusted maximum two times while the anchor may turn back at most 10 mm. The final embedment depth after adjustment process must be equal or larger than h_{nom}
- For further information see ETA-16/0296, Annex B1 to B4

2 PRODUCT DESCRIPTION - MATERIALS

Product	Designation	Material	Nominal characteristic steel yield strength f_{yk} [N/mm ²]	Nominal characteristic steel ultimate strength f_{uk} [N/mm ²]	Elongation at rupture A_5 [%]
1	MCS-S	Steel EN 10263-4 zinc flake coating acc. to EN ISO 10683 ($\geq 5\mu\text{m}$)	560	700	≤ 8
2	MCS-SK, MCS-P, MCS-PG and MCS-	Steel EN 10263-4 galvanized acc. to EN ISO 4042 ($\geq 5\mu\text{m}$)	560	700	≤ 8
3	MCSr-S, MCSr-SK and MCSr-P	Stainless steel A4/316 (1.4571)	560	700	≤ 8

3 INSTALATION INSTRUCTIONS

1. Drilling the hole (by hammer drilling only)
2. Cleaning the hole (see ETA-16/0296, Annex B1 to B4)
3. Bring in position plug and attachment, screw in the plug with an impact screwdriver (for max. impact torque of the screwdriver, see the table Installation Parameters). The head of the concrete screw must be flush with the attachment.
4. After adjustment with shims, the anchor must be tightened with a torque wrench to the specified T_{inst} value. The anchor may be adjusted for a maximum two times.

Graphic installation instruction for MCS and MCSr

- 1) Steel failure
- 2) Concrete cone failure
- 3) Pry-out failure

8 IMPORTANT NOTICE

Values given above are valid under the assumptions of sufficient cleaning of the drill hole and anchoring in cracked or non-cracked concrete. For the design the complete European Technical Assessment ETA-16/0296 has to be considered. In recommended resistance the partial safety factor for material as regulated in the ETA, as well as a partial safety factor for load action $\gamma_L = 1.4$ are considered. For combination of tensile loads, shear loads, bending moments as well as reduced edge distances or spacing's (anchor groups) see ETA-16/0296 or Mungo design software. The data must be checked by the user under the responsibility of an engineer experienced in anchorage and concrete work. This is to ensure there are no errors and all data is complete and accurate and complies with all rules and regulations for the actual conditions and application. Anchor design is performed according to the ETAG 001 in combination with European Technical Assessment ETA-16/0296 of 10 May 2016.
